

dichroic ice globe

This kaleidoscope/sculpture is both commanding and ethereal. A planet, covered entirely in hundreds of pieces of transparent dichroic glass, shimmers every time it is twirled or touched. Perched atop it is kaleidoscope, also enhanced with that same glass. All the metal parts, stand and scope, have been powder coated in a soft textured silver. The liquid cell, filled with globes and moons and stars, delights with its rich jewel colors.

And this kaleidoscope can be enhanced with many other interchangeable cells, cells of your choice. A stunning centerpiece - especially as the light hits the dichroic.

2 mirror 6 point star. 3 diopter glass magnifying lens. Size approx.: 19" high with a 6" round base
kaleidoscope is 9" x 3"

A very limited edition of 2.
