

## lit from within

This very special scope launches the new Christmas Series from Judith Paul. Each design will feature a holiday icon cut from incredibly colored dichroic glass that is then slumped and molded to highly decorative powder coated aluminum tube - with an eyepiece and cage to match. And it is then fitted with a sparking liquid filled themed cell.

"Lit from Within" celebrates the Christmas tree - colored and garlanded in flowing dichroic. Each tree is distinct in patterning and the powder coating sparkles with confetti bits that echo the coloring (see samples in photo). Only the interior mandalas can equal the intensity and beauty of the exterior and they are made with crystals, miniature trees, lights, and ornaments, wire working, dichroic pieces and lampworked glass.

Truly, it is "Lit from Within" as it captures the lights and excitement of Christmas.

First surface mirror. 2 mirror 5 point star (of course). 3 diopter glass magnifying lens. Size approximate: 8 1/4" x 2 3/4".
